**Description**

The css for disabled ode-TextButtons is used

Origin

Screen1 cannot be removed or renamed yet the related buttons are shown like normal. After some look-up, the css supposed to apply to disabled ode-TextButtons is not used. Some of those buttons are "Remove Screen", "Rename" and "Remove" for Screen1, "Designer" in designer view, "Delete Project" when none is selected.

Inspection

The suspected selector is .ode-TextButton[disabled] in appinventor-sources/appinventor/appengine/war/Ya.css. It is shown by Dust-Me that selector is not used even though Screen1 is currently selected

According to PushButton (GWT Javadoc) (http://www.gwtproject.org/javadoc/latest/com/google/gwt/user/client/ui/PushButton.html), style rule for disabled buttons should have up-disabled appended. So should ode-TextButtons because the associated widget, TextButton, is a subclass of PushButton. Indeed, the html-class for those buttons, e.g. "Rename", has ode-TextButton-up-disabled.

Solution

Change .ode-TextButton[disabled] to .ode-TextButton-up-disabled
